Janet(UK) working closely with a set of Anchor Tenants have set up a single Supplier framework agreement for the detailed design, supply, installation, configuration, commissioning and maintenance of a co-location datacentre facility with power, cooling and shared facilities including security.

The framework agreement enables the long-term utilisation of the datacentre environment for a range of activities including:

High performance computing (HPC) systems with high power requirements but moderate availability requirements

Administration, teaching and learning systems with moderate power requirements but high availability requirements

Other research systems that may have a requirement for higher levels of data confidentiality, and to operate in an NHS/Higher Education secure research zone.
